## **Newsletter to Barossa Infrastructure Ltd Customers**

### **BIL Expands to a 9,000 Megalitre per year scheme**

Barossa Infrastructure has accepted the offer from SA Water to expand the scheme capacity from 8,000 to 9,000 Megalitres per annum. Our thanks go to those who participated in the expansion.

Customers who have paid their deposits will shortly receive confirmation of their acceptance. If you have any questions please contact either Neville or me. Our contact details are below.

The BIL scheme was designed to have a capacity of 10,000 Megalitres per annum. This expansion moves us closer to this goal and the maximum use of our assets, which will assist in ensuring the lowest sustainable water price continues to be achieved.

### **Excess Water and Temporary Trading of BIL Water in 2014/15**

A number of customers have used more water than their contracted amounts and received excess water accounts. It is most important that customers keep within their contracted amounts and liaise with the BIL office if they have either surplus water or require additional water.

There is still an opportunity to advise either surplus water or your requirements for additional water. Please check you recent accounts against your requirements. In particular, there is an opportunity to avoid unused water charges as customers with excess water accounts will wish to balance their requirements.

In all cases trades are matched with available water on a first-come basis. A form is attached.

### **BIL Winter Maintenance**

BIL is commencing a program of extensive winter maintenance to ensure the most reliable supply is achieved. This includes upgrades to all Pumping Stations and to a number of Pressure Reducing Valves. I apologise for any service disruptions this will involve and will advise significant disruptions on the web site.
